

Analyse linguistique

by Dr YOKOSSI

Course

Linguistic Analysis has to do with a study and examination of language; it's structure and use in vertical contains. It involves analysing the grammar, the vocabulary, syntax, semantics, phonology and pragmatic of the language to understand how it functions and it is used to convey meaning.

Additionally linguistics analysis aims to understand the internal working of languages itself without specific

consideration of the broader context in which it is used.

In which fields linguistics analysis can be applied ?

Linguistic Analysis can be applied such field as :

- linguistics itself,

- Literature

- Communication

studies,

- Psychology,

- Phonology

- Computer
science

- Translation.

etc ...

The link between linguistics analysis and discourse semantics

- focus on language
- contextual consideration
- textual Unit
- interdisciplinary approach

Both of them are concerned language study. They seek to understand how language is general similarity, they approach language study from different perspectives.

In terms of focusing on language, both **linguistics analysis** and **discourse semantics** examine language including

its structure syntax, semantics and pragmatics , grammar, vocabulary.

Difference between linguistics analysis and semantics

From the point of contextual consideration **linguistics analysis** focuses on the internal structure of language while **discourse semantics** considers the broader context, cultural and situational factors that influence meaning.

As far as textual unit are concerned **linguistics analysis** focus on individual elements. Such as ; words, phrases and sentences, whereas **discourse**

semantics consider broader units of language as : Conversation, narrative, and discuss to understand how language is constrative and organised to convey meaning.

What are the interdisciplinary approach of linguistics analysis and discourse semantics

From the interdisciplinary approach both linguistics analysis and discourse semantics draw open inside and methodology from different other fields such as : sociology, psychology, and topology, phonology, pragmatic ... to provide comprehensive understanding

of meaning .

In essence, linguistics analysis and discourse semantics share a lot of similarity thought approaching the study of language from different perspectives at times as pointed above.
